Summary and recommendation

The queries performed gave the analyst the insight on the dataset to focus on and visualise, the visualisation.

- The superstore's most profitable department is found to be the technology department, followed by the office supply department. The furniture department will probably need more promotion to increase profit and bring it into line with other departments.
- Standard class shipping appears to be the most popular option; it may be optimized and made more effective to better satisfy customers.
- Most of the subcategories show that they bring in profit for the superstore and this shows there is great diversification which should continue within the superstore.
- The majority of the subcategories demonstrate that they generate revenue for the superstore, displaying effective diversity inside the superstore.
